

# Latest Polyamide Door..

## “Multi-point Hook Lock”

Our latest addition to our product range being released is our new polyamide door system. The fact that there were two large projects waiting on the new door, the system was fast track though to accommodate these orders. The design of the curval feature helps reduce the sight line on the traditional bulky profile. The new system also includes a choice of thresholds, one of which is a low ramped profile for disability access. Traditional on polyamide doors they all included a large rebated threshold and in the past most projects changed to commercial doors to allow for disability access.

## “High weather & U-value Performance”

The system also accommodates an internally glazing option, for additional security. Most other door systems, provides an adaptor which sometimes beefs up the profiles sight lines. Our new system has separate extrusion design to allow for all eventualities to be internally glazed. The in-house design department has also given thought to the ironmongery, with multi-point hook locking, French door locking and electric door strikes for access control. All of which is stocked and available of the shelf at our Lisburn Premises...

## “Low Threshold”

The polyamide door will be complimented with the option of tilt and slide along with the fold and stacking (Bi-folding) screen.

## “Electric Strike Lock”

Max Door Leaf Size / Weight			
Max Door Leaf Height	Max Door Leaf Width	Max Door Leaf Weight	
3 No. Hinges per Leaf	2100 mm	915 mm	100 Kg
3 No. Hinges per Leaf	1400 mm	1050 mm	120 Kg
4 No. Hinges per Leaf	2420 mm	1050 mm	120 Kg

**Door Hinge Prep (Single & Double Doors)**  
Adjustable Door Hinge  
AP Window / Door System

## “Internally Glazed”
